Applications
Commercial and Industrial

Brief Description
The A1700 offers outstanding measurement and complex tariff capabilities for use in both industrial and commercial direct connected, CT and CT/VT operated applications. The meter can operate as a stand alone unit or as part of a comprehensive metering system.

The A1700 features include a fully programmable customer defined display and an optical port for local communications. Two slots are provided for the addition of an input (or output) and a communications module. Load profile data can be stored for up to 900 days. As an alternative the meter can store 450 days of load profile and 370 days of instrumentation profile data. Data stream mode communications allows up to 90 days of 30 minute profile data to be collected in less than 30 seconds.

Communications modules can be RS232 or RS485.

A range of communications media (PSTN, GSM, Ethernet, PAKNET) plug into a module directly under the meter terminal cover.

An optional input module provides the ideal solution for multi-utility metering. As an alternative, a module with four outputs can be provided to increase the number of outputs to eight.

A module with battery can be provided to read meter data when power has been removed from the meter. Windows™ ’Power Master Unit’ software programs or reads the meter data.

The meter can be supplied to meet accuracy Class 0.2s or 0.5s for CT operation and Class 1 or Class 2 for direct connected, CT or CT/VT operation.

EC Directive 2004/22/EC (MID): Class A, B or C.

Features
- Accuracy Class 0.2s or 0.5s for CT operation and Class 1 or Class 2 for direct connected, CT or CT/VT operation
- EC Directive 2004/22/EC (MID) Class A, B or C
- Direct connected, CT or CT/VT operated
- Comprehensive tariff structure
- 2 line, multilingual display
- Instantaneous instrumentation values
- Instrumentation monitoring
- Instrumentation profiling
- Extensive load profile data
- 2 module slots for extended functionality
- Voltage imbalance detection
- Temperature compensation to maintain RTC accuracy during power outages
- Summation of 5 input values
- 5 co-incident demand values
- 2 kVA registers
- High security design

Options
- Up to 8 outputs
- Interchangeable input/output modules
- Communication modules (RS232 or RS485)
- Communications media (PSTN, GSM, Ethernet, PAKNET)
- Data stream mode communications
- Transformer loss compensation
- Short terminal cover
- Display backlight
- Replaceable RTC backup battery
- Read without power
- Auxiliary a.c. or d.c power supply
- 230V a.c output
Measured Quantities
kWh total import/export
tvarh Q1, Q2, Q3, Q4
kVAh (2 calculated values)
3 customer defined registers - summation of up to 5 values
4 inputs for external meters (if fitted)

Tariff Structure
32 Time of Use Registers
8 Maximum Demand Registers
5 Co-incident Demands
2 Sliding Demands
12 Seasons
24 Season Changeover Dates
96 Switching Times
64 Exclusion Dates
May vary according to firmware version
Programmable deferred tariff and display

Data Storage
- Programmable integration period
- Load profile storage or instrumentation quantity
- Demand & instrumentation integration periods - Independently defined

Number of days (30 minute period, 1 channel)

Up to 36 sets of historical data. Fully customer defined, multilingual

Input/Output
Four input module - End of billing, end of integration period, inputs from external meters
Four output relay module - Retransmit pulses from energy registers, customer defined registers or any time-of-use register
Option of three solid-state relays and one 5A relay or four solid-state relays

Communications
Local: IEC 62056-21 (formerly IEC 61107)
Remote: Interchangeable modules (RS232, RS485 or customer specific)
Media: GSM, PSTN, Ethernet, PAKNET

Case
Sealed flip-up lid
- Conceals utility/reset pushbutton
- Provides for customer's own information to be securely added to the nameplate
- Allows visual identification of modules fitted

Options
- ANSI communications port
- 9.5 mm terminal block
