Flowing smoothly at Severn Trent Water

MWA was consulted to provide advice for the selection of RHI Energy Meter upgrades to the Severn Trent Water plant at Stoke Bardolph, Nottinghamshire.

A lack of control, with only pulse output from its meters, lead Stoke Bardolph to contact MWA Technology Ltd for technical help and advice.

Having gained a clear picture of the problem, the current metering arrangement and the client's requirements, MWA supplied a new metering system, to include the installation of an analogue card.

“The new system rectified the output problem and also provided improved communication, increased data, better heat accuracy and more control for the client.”
