For Fuel Gas Control

# **Ultrasonic Flow Meter**

# ATZTA UX/UZ

Developed jointly by Tokyo Gas Co., Ltd. and our company

No straight pipe section required for installation

Reliability, Creativity, Service

Wide operation range

Battery replaceable

# Developed for customer's "NEEDS"

## Need 1 Customer wants to install a flow meter immediately after a bend part in the piping

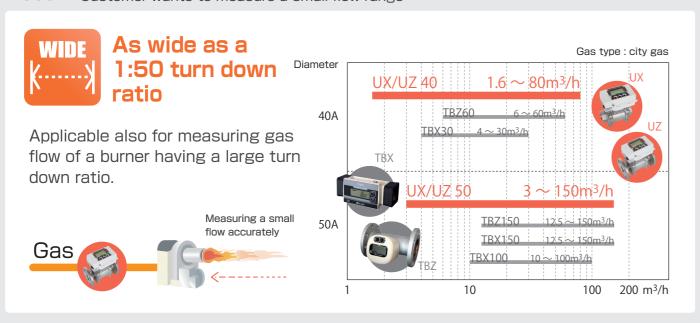

# No straight pipe section required for installation

It is possible to connect the flow meter directly to a bend such as an elbow piece and a flexible pipe.

The flow meter has to be located 10D or more distant from a governor irrespective whether it is placed upstream or downstream of the governor. Falling to meet this condition may lead to inaccurate measurements. (D = pipe diameter)

# Need2 Customer wants to measure a small flow range

# Need3 Customer wants to replace batteries

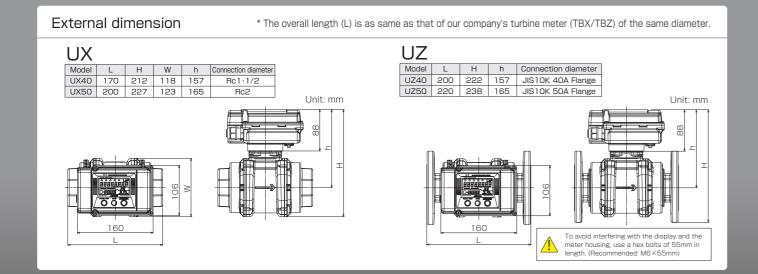

Need4 Customer wants to reduce maintenance work

Need5 Customer wants to use it outdoors

#### Pressure loss chart

This date stands for pressure loss for air.
For city gas 13A, multiply the reading by 0.64 (specific gravity of the gas).
For LPG, multiply the reading by about 1.55 (specific gravity of LPG).
