

SONICO® Stewardship

Save Water, Cut Costs, Reduce CO2

What if you could...

- Conserve water & reduce your operating costs
- Help protect scarce resources & the environment
- Contribute towards Net Zero targets
- Improve your competitiveness
- Improve your business sustainability & CSR

...all from a single metering solution ?

SONICO® Stewardship

Conservation ✓
Costs ✓

What is Water Stewardship?

The Alliance for Water Stewardship (a4ws.org) defines water stewardship as *“the use of water that is socially and culturally equitable, environmentally sustainable and economically beneficial, achieved through a stakeholder-inclusive process that includes both site and catchment-based actions”*. Good water stewards manage water better, mitigate water-related risks & help contribute towards sustainability goals.

Our Solution

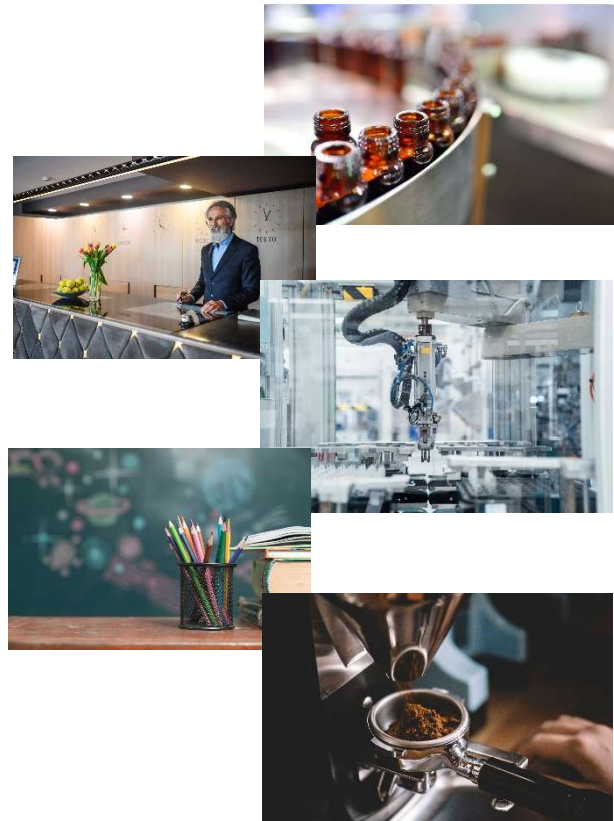

GWF's SONICO® Stewardship solution combines innovative, smart water metering technology along with an intuitive online data visualization tool to help businesses manage their water usage more effectively. We help you monitor consumption patterns as well as alerting you if you have a leak. Our technology is easy to deploy, can measure water for both clean and wastewater applications ranging from small-to-medium size clients to large corporations.

Your Benefits

Lower operating costs: gaining greater understanding of your water usage enables you to manage its use more effectively by prioritizing interventions to support conservation. Using less water reduces your utility bill giving immediate cost improvement and improved profitability.

Reduce your carbon footprint: taking care of our carbon footprint helps contribute towards a net zero future, protecting our environment. Much of the water we use is often heated so reducing water usage can help reduce energy consumption also. Using less water also helps water utilities reduce the impact on the environment too by reducing the amount of waste they must treat and recycle helping to avoid potential spills into rivers and seas.

Improved competitiveness: attract more clients to your door by managing water more effectively and demonstrate to your customers how your business takes sustainability seriously.

SONICO® Stewardship

Save Water, Cut Costs, Reduce CO2

GWF's smart metering technology allows you to develop *your* water stewardship plan at *your* pace, to suit *your* business. Follow the key steps below to maximize the benefits of good water stewardship. GWF is on hand to support you through every stage,

SONICO® Stewardship help you understand...

Digitise

- Get started with our easy-to-deploy smart metering technology
- Measure water usage, monitor for leaks, get alerts via NetQ-EDGE

How much water am I using?

Highly accurate measurement of resources gives clear insight into real consumption

Where is it being used?

Understand which processes and activities are using the most water

Analyse

- Use data to develop intervention strategies to help conserve water
- Add new monitoring devices when you need to get more insight

When do I use it?

What time of the day / week / month are my water resources being used?

Certify

- Become a Water Leader by achieving AWS* accreditation
- Achieve your sustainability goals & protect the environment

What am I wasting?

Am I utilising water resources efficiently and sustainably?

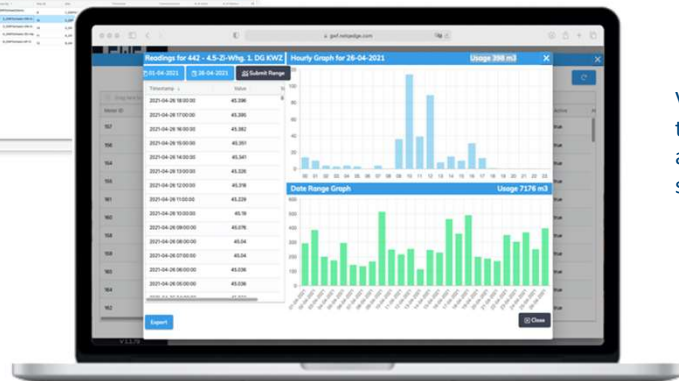

*AWS, The Alliance for Water Stewardship (a4ws.org)

NetQ-EDGE is hosted in secure servers hosted by Amazon Web Services

GWF's innovative smart metering technology allows Plug & Play set up and operation. To transmit water usage data to the NetQ-EDGE online data visualization platform

View consumption track usage & get alerts using your smartphone
