

LoRaWAN® as a Service

IoT Connectivity

LoRa Alliance® Member

Overview

As an IoT solution provider, telecom operator or sensor manufacturers you may have tested and deployed on public IoT networks before. However the need for secure, widespread, carrier-grade coverage is key in helping you scale commercially and provide more for your customers.

Connexin provides carrier-grade LoRaWAN® networks and network deployment with end-to-end managed services to provide you dedicated connectivity quickly and efficiently, helping you achieve outcomes for you customers faster. With existing coverage in the UK and a leading gateway deployment leadtime you can take advantage of our flexible sensor credit model to get your devices connected today with less risk and downtime.

Trusted By

How it Works

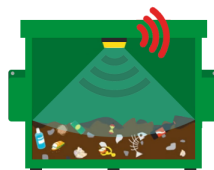

1

Tell us where you need coverage.

2

Confirm the number of sensors/devices you want to connect.

3

Get access to existing networks or newly deployed gateways.

Why customers choose Connexin

Experience

We've deployed numerous city-wide LoRaWAN® networks since 2018 and the UK's first Smart City Street so know what it takes to roll out carrier-grade connectivity.

End-to-end Service

With our managed services you don't have to stress. From network planning to deployment & onboarding you can focus on providing outcomes for your customers.

Flexibility

Wherever you need coverage and however many devices you need connecting, our unique pricing model gives you the ultimate flexibility to scale as and when you need to.

Our Pricing

£low*
per sensor credit

Pricing is based on sensor credits. Each credit equals 1 sensor or device connected to our network for a year. You can use your credits in any way you want. For example if you purchased 10 sensor credits, they can be used to connect 10 devices for 1 year, 1 device for 10 years or even 2 devices for 5 years.

Outcomes and Value

With LoRaWAN® as a Service we create value for customers in a number of ways...

Reduced Risk

By choosing a network as a service approach we reduce your risk by deploying, managing and maintaining the network on your behalf.

Speed of Deployment

With our experience in deploying networks we get your devices connected quickly & efficiently, whether that's within hours on our existing network or weeks for new deployments.

Quality of Service

By using our carrier-grade networks you don't have to worry about downtime or high packet error rates when connecting devices.

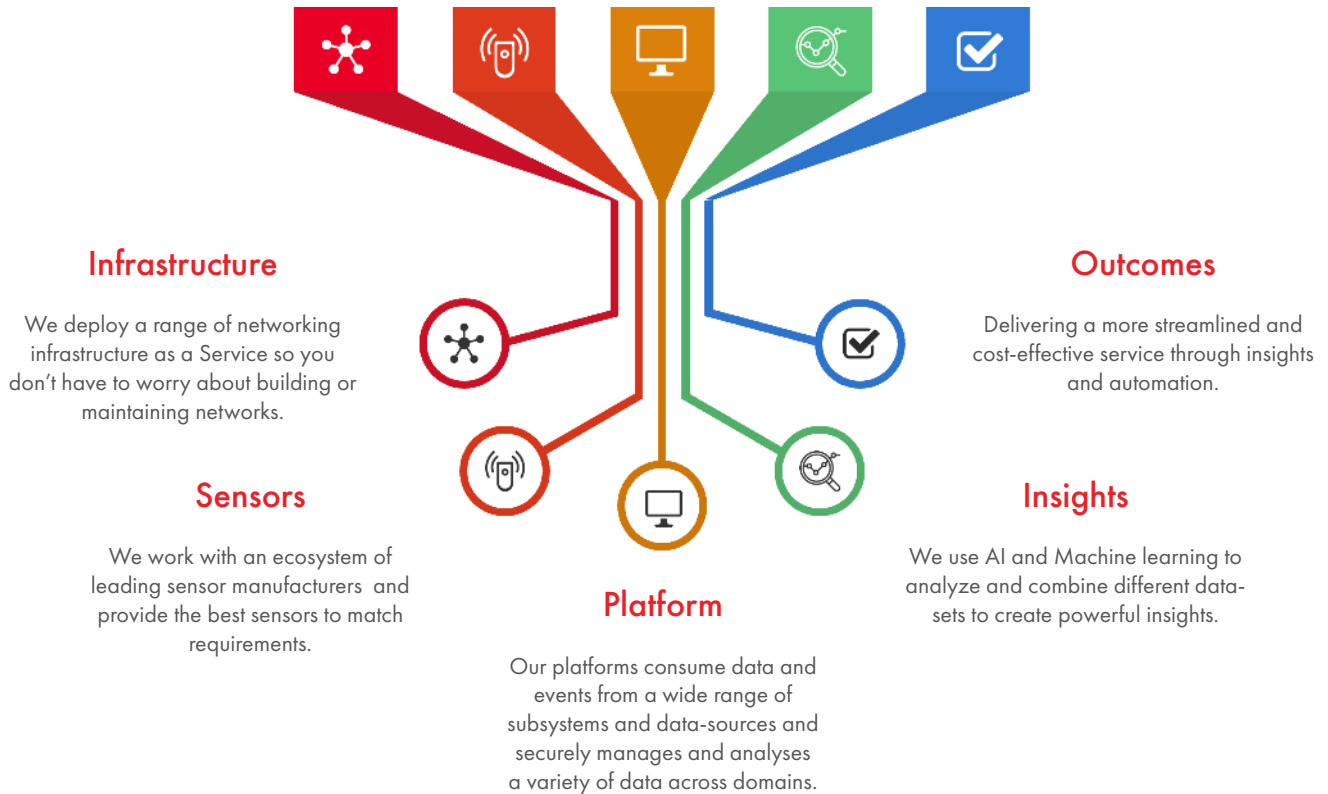

What our Customers Say

"The challenge we articulated to Connexin was how we could make LoRaWAN affordable. Their LoRaWAN as a service model allows us to grow our business but to take advantage of large-scale pricing from the start and create and scale sustainable Smart Water Networks across our sites."

Keith Edwards, Operation and Quality Manager at Icosa Water

More than just Networks

End to End Solutions

Connexin provides End to End IoT solutions meaning that we can support customers all the way from infrastructure through to data, platform and insights for numerous different use cases.

This means we can provide a variety of gateways, utilise the right infrastructure for your needs, connect a wide range of sensors and provide a network and data agnostic platform to help you visualise data and drive insights to help you produce the right outcomes for you and your customers.
